Office Action Summary

Art Unit 1724

1. The disclosure is objected to because of the following informalities: On page 5, there are references to claims by number. Also, the section headings are missing.

Appropriate correction is required.

2. Claims 37-72 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims contain vague and indefinite language, such as "in particular," "preferably" and "e.g." Proper antecedent basis for elements such as "the pivotal axes" in claim 37 should be established.

3. Claims 37-72 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action.

The recitation of a sieving device for a sluice channel having a number of sieving panels sequentially arranged adjacent to one another substantially transverse to the direction of flow forming an endless driven belt, wherein the revolving motion is substantially within one single plane and the pivotal axes of the panels are perpendicular to the sieving surface patentably distinguishes over the prior art of record.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
